Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Uniswap, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Description

Speed-Fi is a multi-functional technological application offering a range of decentralized finance (DeFi) services, including but not limited to multi-network DEX, multi-network Launchpad, NFT supermarket, and WEB3 P2E VR Racing game

Project Engagement

During the 8th of June 2022, **SpeedFi Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

```
Context
IERC20
 SafeMath
 Address
Ownable
IUniswapV2Factory
IUniswapV2Pair
IUniswapV2Router01
IUniswapV2Router02
```

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/UniswapV2Router02.sol	8dd79c15f935559b7b8e7a45bef20751edc1354d
contracts/SpeedFi.sol	282c4003577876ddab3d27127e3c1872fb3d8606
contracts/UniswapV2Factory.sol	4fb7fff822581b1ba8c0db399be46689d216e1af

v1.0

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

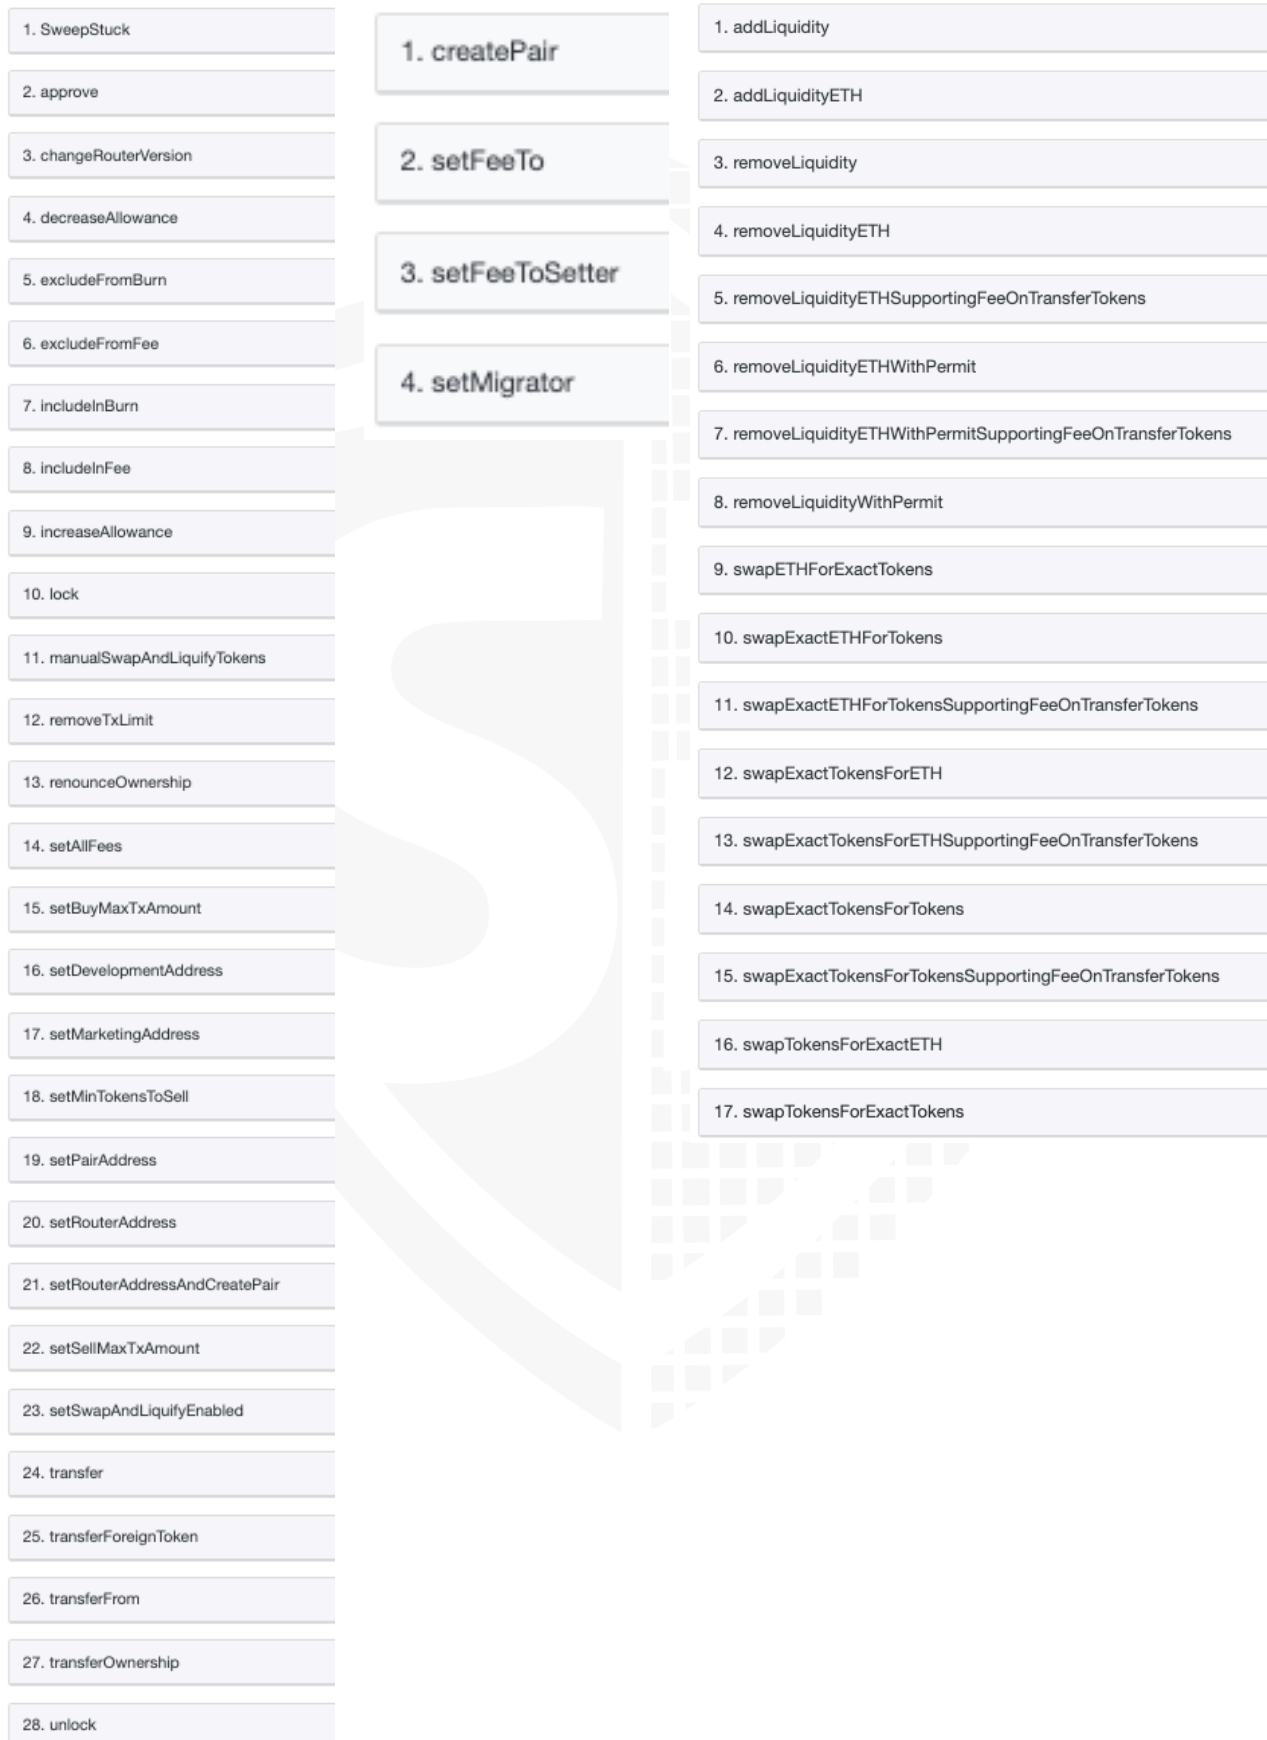

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

Write functions of contract v1.0

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	—	—	—
Max / Total Supply	1000000000		

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	-	-	-

Comments:

v1.0

- Owner can lock user funds by
 - blacklisting addresses
 - Setting buy max tx amount to 0
 - Setting sell max tx amount to 0
- Tokens
 - will be burned while tx

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	⚠
Unverified / Not checked	✗
Not available	—

Modifiers and public functions

v1.0

- transfer
- approve
- transferFrom
- increaseAllowance
- decreaseAllowance
- setRouterAddressAndCreatePair
 - onlyOwner
- setRouterAddress
 - onlyOwner
- setPairAddress
 - onlyOwner
- excludeFromBurn
 - onlyOwner
- includeInBurn
 - onlyOwner
- excludeFromFee
 - onlyOwner
- includeInFee
 - onlyOwner
- setBuyMaxTxAmount
 - onlyOwner
- setSellMaxTxAmount
 - onlyOwner
- removeTxLimit
 - onlyOwner
- setMinTokensToSell
 - onlyOwner
- setMarketingAddress
 - onlyOwner
- setDevelopmentAddress
 - onlyOwner
- setSwapAndLiquifyEnabled
 - onlyOwner
- setAllFees
 - onlyOwner
- changeRouterVersion
 - onlyOwner
- transferForeignToken
 - onlyOwner
- manualSwapAndLiquifyTokens
 - lockTheSwap
 - onlyOwner
- SweepStuck
 - onlyOwner

- renounceOwnership
 - onlyOwner
- transferOwnership
 - onlyOwner
- lock
 - onlyOwner
- unlock

Comments

- [Deployer can set following state variables without any limitations](#)

- minimumTokensBeforeSwap
- Deployer can enable/disable following state variables
 - swapAndLiquifyEnabled
 - _isExcludedFromFee
 - _isExcluded
 - _excluded
- Deployer can set following addresses
 - uniswapV2Pair
 - uniswapV2Router
 - developmentAddress
 - marketingAddress
 - _owner
- Existing Modifiers
 - onlyOwner
 - lockTheSwap
 - lock
 - ensure
- Only owner can transfer contract balance to his own address
- Tx amounts can be set to 0

Please check if an OnlyOwner or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/UniswapV2Router02.sol	4	6	821	429	353	45	580	
	contracts/SpeedFi.sol	5	5	1019	799	596	50	650	
	contracts/UniswapV2Factory.sol	6	4	473	431	332	60	363	
	Totals	15	15	2313	1659	1281	155	1593	

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

AUDIT PASSED

Critical issues

No critical issues

High issues

No high issues

Medium issues

No medium issues

Low issues

No low issues

Informational issues

No informational issues

Alleviation

#1

File: Main

Type: Variable has no functionality, L948-950

Description:

State variable has no functionality in the contract.

- _buyBurnFee
- _buyMarketingFee
- _buyDevelopmentFee

Remove unnecessary state variables

SpeedFi Team: It is declared to fetch information from the public state into any application from the contract so the data modification is needed in buy percentages as well even if it's not defined or used anywhere.

#2

File: Main

Type: State variables that could be declared constant (constable-states), L436 L437 L438 L439 L431 L432 L411

Description:

Add the `constant` attributes to state variables that never change

SpeedFi Team: This has been kept as it is since the buy fee need to be modified for data fetching in applications from the contract.

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.
